

实验2 JSP基本语法

实验目的

1. 掌握 jsp表达式、程序段和声明，URL传值
2. 熟悉 jsp指令和动作的使用

基础相应类

```
java

1  package com.xlf.school.experiment2.model;
2
3  /**
4   * 基础响应类
5   * <p>
6   * 用于封装响应数据
7   * 该类为所有响应类的基类
8   *
9   * @since v1.0-SNAPSHOT
10  * @since v1.1-SNAPSHOT
11  * @author xiao_lfeng
12  */
13  public class BaseResponse {
14      private String output;
15      private Integer code;
16      private String message;
17      private String data;
18
19      public String getOutput() {
20          return output;
21      }
22
23      public BaseResponse setOutput(String output) {
24          this.output = output;
25          return this;
26      }
27  }
```

```

28     public Integer getCode() {
29         return code;
30     }
31
32     public BaseResponse setCode(Integer code) {
33         this.code = code;
34         return this;
35     }
36
37     public String getMessage() {
38         return message;
39     }
40
41     public BaseResponse setMessage(String message) {
42         this.message = message;
43         return this;
44     }
45
46     public String getData() {
47         return data;
48     }
49
50     public BaseResponse setData(String data) {
51         this.data = data;
52         return this;
53     }
54 }

```

实验内容

1. 制作一个登录表单，输入账号和密码，如果账号和密码相符，则显示“登录成功”，否则显示“登录失败”。 ∴

● 源代码 ∴

```

java
1     package com.xlf.school.experiment2.controller;
2
3     import com.google.gson.Gson;

```

```
4  import com.google.gson.reflect.TypeToken;
5  import com.xlf.school.experiment2.model.BaseResponse;
6  import jakarta.servlet.annotation.WebServlet;
7  import jakarta.servlet.http.HttpServlet;
8  import jakarta.servlet.http.HttpServletRequest;
9  import jakarta.servlet.http.HttpServletResponse;
10 import org.jetbrains.annotations.NotNull;
11
12 import java.io.IOException;
13 import java.util.HashMap;
14 import java.util.logging.Logger;
15
16 /**
17  * 用户登录控制器
18  * <p>
19  * 用于处理用户登录请求, 并返回登录结果
20  *
21  * @author xiao_lfeng
22  * @since v1.0-SNAPSHOT
23  * @since v1.1-SNAPSHOT
24  */
25 @WebServlet("/api/v1/login")
26 public class UserLoginController extends HttpServlet {

```

● 截图

3. 编写一个“计算找零”的页面，在页面上输入应付款、实际付款，提交，在页面底部显示应该找零的数量和各种面值的张数，例如：找零是56元，应付款为50元1张，5元1张，1元1张。假设有50、20、10、5、1这5种面值。

● 源代码

```
jsp
1  <%@ page contentType="text/html;charset=UTF-8" language="java" %>
2  <%@ page import="java.util.LinkedHashMap" %>
3  <%
4      // 获取表单输入数据
5      String amountDue = request.getParameter("amountDue");
6      String amountPaid = request.getParameter("amountPaid");
7      String changeResult = "";
8
9      // 判断是否已输入应付款和实际付款
10     if (amountDue != null && amountPaid != null && !amountDue.isEmpty() &&
11         !amountPaid.isEmpty()) {
12         try {
13             int due = Integer.parseInt(amountDue);
14             int paid = Integer.parseInt(amountPaid);
```

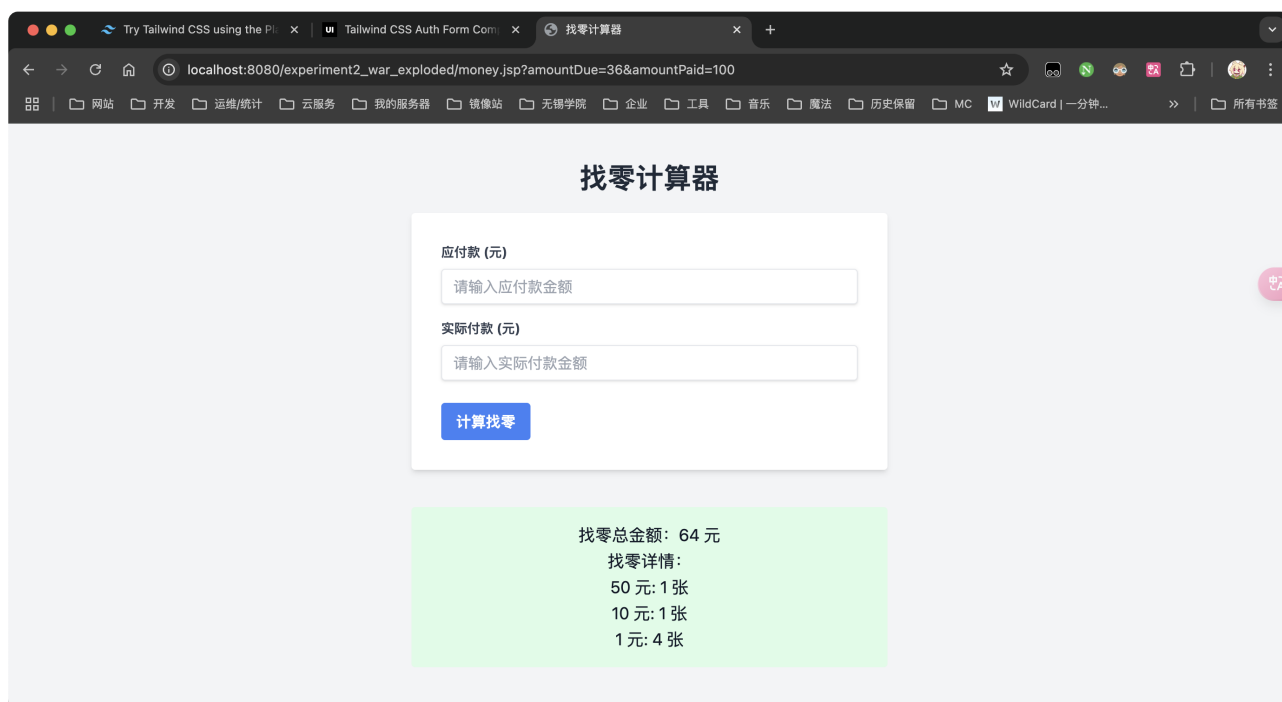

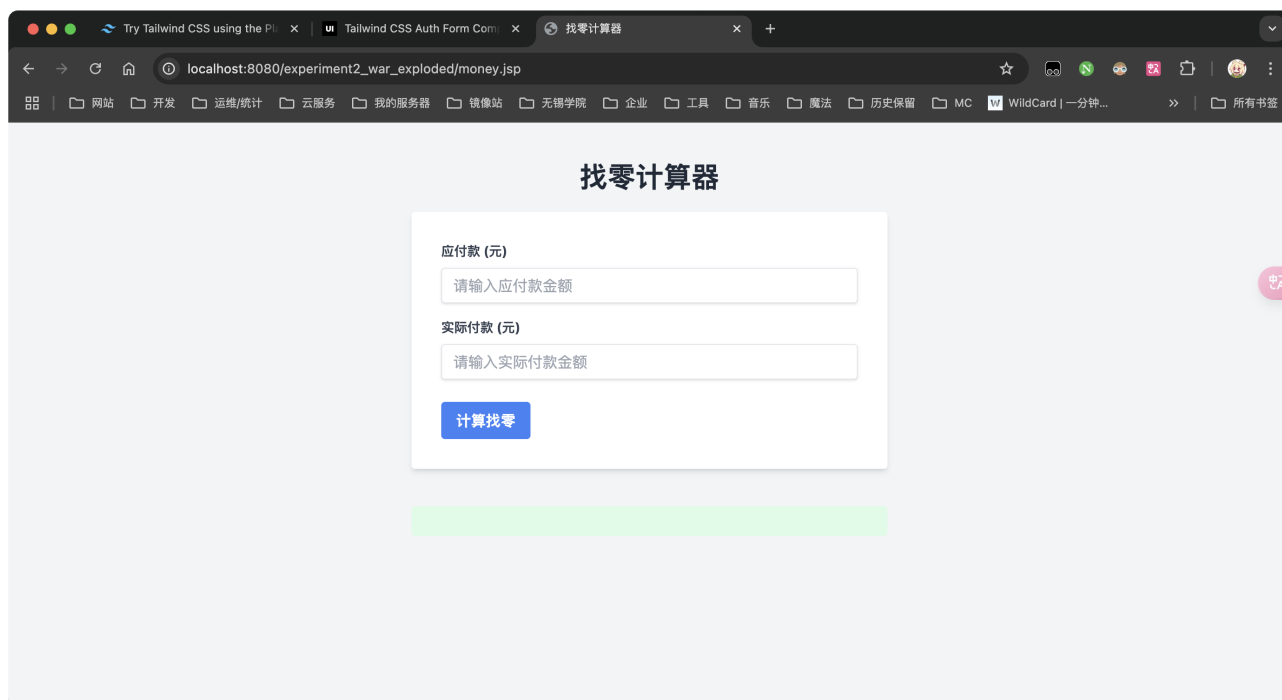

```
14         int change = paid - due;
15
16         // 计算找零
17         if (change < 0) {
18             changeResult = "付款不足！请支付足够金额。";
19         } else if (change == 0) {
20             changeResult = "没有找零，您支付的金额正好。";
21         } else {
22             // 面值数组
23             int[] denominations = {50, 20, 10, 5, 1};
24             LinkedHashMap<Integer, Integer> changeDetails = new LinkedHashMap<>();
25
26             // 计算每种面值的张数
27             for (int denom : denominations) {
28                 int count = change / denom;
29                 if (count > 0) {
30                     changeDetails.put(denom, count);
31                     change -= denom * count;
32                 }
33             }
34
35             // 拼接找零信息
36             StringBuilder sb = new StringBuilder();
37             sb.append("找零总金额：").append(paid - due).append(" 元<br>");
38             sb.append("找零详情：<br>");
39             for (Integer denom : changeDetails.keySet()) {
40                 sb.append(denom).append(" 元：").append(changeDetails.get(denom)).append(" 张<br>");
41             }
42             changeResult = sb.toString();
43         }
